

Task Information

- **Task Title:** Task Management Web App with Authentication
- **Task ID:** FS-1
- **Domain:** Full-Stack Web Development
- **Difficulty Level:** Advanced
- **Assigned Date:** 4th May 2026
- **Submission Deadline:** 8th May 2026

Objective

Build a full-stack application that demonstrates real-world project management workflows, including authentication, task handling, and state management across a Kanban-style board.

Problem Statement

A small agency requires an internal task management system to organize projects, assign responsibilities, and track progress efficiently. The system should function similarly to a lightweight Kanban board (e.g., Trello), enabling teams to collaborate in real time.

Task Requirements

The solution must include the following features:

- User registration and login using JWT-based authentication
- Create, update, delete, and move tasks across columns (To-Do, In Progress, Done)
- Assign tasks to specific users
- Add due dates and priority labels to tasks
- Fully functional REST API connected to a database
- Protected routes accessible only to authenticated users

Technical Constraints

- **Frontend:** React
- **Backend:** Node.js with Express
- **Database:** MongoDB or PostgreSQL
- **Authentication:** JWT
- **Deployment:** Vercel / Railway
- Follow clean architecture and modular code practices

Deliverables

Participants must submit the following:

- GitHub repository (frontend + backend)
- API documentation (Postman collection or Swagger)
- Deployed application link with test credentials
- 1-page technical summary explaining architecture decisions

Submission Guidelines

- Submit project in **.zip format**
- Naming format: **Task-1_Ref-ID.zip**
- Remove unnecessary files (node_modules, build folders, etc.)
- Ensure project is complete and runnable

 Incomplete or improperly structured submissions may be rejected.

Evaluation Criteria

- Functionality & Requirements Completion – 30%
- Code Quality & Architecture – 30%
- UI/UX & User Experience – 20%
- Documentation & Clarity – 20%

Bonus Challenge (Optional)

- Implement drag-and-drop functionality for task movement
- Add real-time updates using WebSockets
- Implement role-based access control (Admin/User)

Plagiarism Policy

Copy-paste or unmodified AI-generated solutions are strictly prohibited. Any violation will result in rejection.

Support & Communication

- Use official community channels and relevant group for queries
- Expected response time: within 24 hours
